

2.9.6 Weatherization Costs and Savings

- DOE Weatherization program requires that States spend no more than an average of \$6,572 per household in PY 2011. All States are using energy audits or priority lists to determine the most cost-effective weatherization measures.
- For PR 2007, DOE weatherization created an average energy savings of \$413 per household, reduced household annual gas heating consumption 32% with a benefit-cost ratio of 1.65.
